similarly,

$$\frac{\sin 105^\circ}{7} = \frac{\sin 30^\circ}{c} \quad (2.0.13)$$

$$c \cdot \sin 105^\circ = 7 \cdot \sin 30^\circ \quad (2.0.14)$$

$$c = \frac{7 \cdot \sin 30^\circ}{\sin 105^\circ} \quad (2.0.15)$$

$$c = 3.62 \quad (2.0.16)$$

1 QUESTION No. 2.5

Draw a $\triangle ABC$ with side $a = 7\text{cm}$, $\angle B = 45^\circ$, $\angle A = 105^\circ$.

we get values :

$$\Rightarrow a = 7; \quad (2.0.17)$$

$$\Rightarrow b = 5.12; \quad (2.0.18)$$

$$\Rightarrow c = 3.62; \quad (2.0.19)$$

2 EXPLANATION

Given,

$$\angle A = 105^\circ, \angle B = 45^\circ \text{ and } a = 7 \quad (2.0.1)$$

we first need to find $\angle C$:

Finding $\angle C$

In $\triangle ABC$,

$$\angle A + \angle B + \angle C = 180^\circ \quad (2.0.2)$$

$$105^\circ + 45^\circ + \angle C = 180^\circ \quad (2.0.3)$$

$$150^\circ + \angle C = 180^\circ \quad (2.0.4)$$

$$\angle C = 180^\circ - 150^\circ \quad (2.0.5)$$

$$\angle C = 30^\circ \quad (2.0.6)$$

By law of sines

$$\frac{\sin A}{a} = \frac{\sin B}{b} = \frac{\sin C}{c} \quad (2.0.7)$$

$$\frac{\sin 105^\circ}{7} = \frac{\sin 45^\circ}{b} = \frac{\sin 30^\circ}{c} \quad (2.0.8)$$

we have:

$$\frac{\sin 105^\circ}{7} = \frac{\sin 45^\circ}{b} \quad (2.0.9)$$

$$b \cdot \sin 105^\circ = 7 \cdot \sin 45^\circ \quad (2.0.10)$$

$$b = \frac{7 \cdot \sin 45^\circ}{\sin 105^\circ} \quad (2.0.11)$$

$$b = 5.12 \quad (2.0.12)$$

Now, vertices of given $\triangle ABC$ can be written as,

$$\mathbf{A} = \begin{pmatrix} 0 \\ c \end{pmatrix} = \begin{pmatrix} 0 \\ 3.62 \end{pmatrix} \quad (2.0.20)$$

$$\mathbf{B} = \begin{pmatrix} 0 \\ 0 \end{pmatrix} \quad (2.0.21)$$

$$\mathbf{C} = \begin{pmatrix} a \\ 0 \end{pmatrix} = \begin{pmatrix} 7 \\ 0 \end{pmatrix} \quad (2.0.22)$$

Now, $\triangle ABC$ can be plotted using vertices a, b and c
Plot of the angle $\triangle ABC$:
